

Effective Dust Collection Solutions

Converting a Cyclone with Cartridge filter to Filter bags!

Start with any OEM cyclone w/cartridge filter

Step 1. Remove cartridge and corrugated ducting.
Step 2. Make custom plenum box and attach it to cyclone exhaust port.

Step 3. Construct custom bottom plenum box with removable dust drawer.

Hi Nicole,

I just wanted to let you know that the filters arrived (inv #29753) and they are installed in my DC system. The improvement in performance is outstanding. The old cartridge filter was creating lots of back pressure. The felt filters are basically limp when running.

Thanks,
Mike

Step 4. Attach bottom plenum box to bottom of the dust collector.
Step 5. Install filter bags & enjoy the newly found Performance while taking up approximately the same shop space!
